

FSDI – 116 ASSIGNMENT SUBMISSION REPORT

 STUDENT:	Tim Strubell
 COURSE:	FSDI 116 – Software Development Methodologies Fundamentals
 COHORT #:	Cohort 68
 CLASS #:	Class 1
 ASSIGNMENT #:	Assignment 1 – AGILE SUMMARY STRUBELL GOODS & GEAR (SGNG)
 SUBMISSION DATE:	Sep 22, 2026
 FOLDER NAME:	fsdi116_ch68_cl1_asgmt1_strubell
 GITHUB REPO LINK:	https://github.com/TStrubell/FSDI_116_Ch68.git

⚡ AGILE SUMMARY | STRUBELL GOODS & GEAR (SGNG) ⚡

SECTION 1 – SUMMARY OF AGILE:

From my understanding, **Agile is not a strict methodology or a step-by-step process, but rather a mindset focused on collaboration, adaptability, and delivering value to customers.** The Agile Manifesto emphasizes that successful software development comes from strong communication, frequent delivery of working solutions, and the ability to respond quickly to changing requirements. Instead of spending months creating detailed plans that may become outdated, Agile teams work in short iterations, gather feedback regularly, and continuously improve both the product and the way they work. Agile values people and interactions, working software, customer collaboration, and responding to change more than rigid processes, excessive documentation, contract negotiations, or following a fixed plan.

As I think about **Strubell Goods & Gear (SG&G)**, Agile would be a valuable approach because customer needs and business priorities can change frequently. *Rather than waiting to complete an entire system, SG&G could release features incrementally, collect feedback from customers and stakeholders, and improve based on real-world usage.* I understand Agile as a process of **continuous learning, reflection, and adaptation**, where teams focus on delivering meaningful business value while remaining flexible enough to adjust when new opportunities or

challenges arise. This mindset helps organizations create products that better meet customer expectations and achieve business goals.

SECTION 2 – FAVORITE AGILE PILLAR:

The Agile value that resonates most with me is **Responding to Change Over Following a Plan**. Agile recognizes that while planning is important, change is inevitable and should be embraced rather than resisted. This value matters to me because I have learned that projects rarely unfold exactly as planned. New information becomes available, customer priorities shift, and unexpected challenges arise. I believe the ability to adapt while staying focused on the overall goal is one of the most important qualities of a successful team. Instead of viewing change as a problem, Agile encourages teams to see it as an opportunity to improve the final product and deliver greater value to customers.

The Agile principle that best supports this value for me is ***“Welcome changing requirements, even late in development.”*** In a real work environment such as **Strubell Goods & Gear**, customer feedback might reveal that shoppers want enhanced product filtering, improved mobile navigation, or new checkout options. Rather than delaying these improvements until a future major release, an Agile team could evaluate the feedback, reprioritize the backlog, and incorporate the most valuable enhancements into upcoming sprints. This approach helps ensure that the product continues to meet customer needs while supporting SG&G's business objectives. **By remaining flexible, collaborating closely with stakeholders, and continuously improving the product, the team can deliver solutions that provide greater value than simply following an outdated original plan.**

SECTION 3 – AI DISCLOSURE:

☐ I did not use AI

☒ *I used AI for help*

☐ AI generated parts of my code

I used *Microsoft Copilot* to help organize and draft the written content for this assignment. This use complies with **SDGKU's** guidelines for AI-assisted learning. **Microsoft Copilot did not generate any source code.** The ideas, interpretations, and final responses represent my own understanding and were reviewed and finalized by *me*, **Tim Strubell**.
